GCSE FOUNDATION · REVISION MAT 5

Transformations

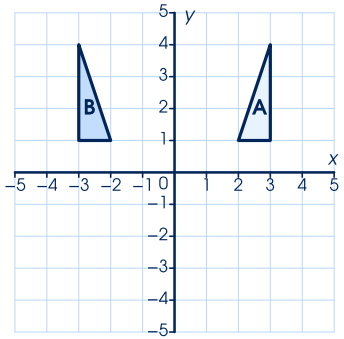

1 Describe fully the single transformation that maps shape A onto shape B.

2 Reflect shape A in the line $y = 2$.

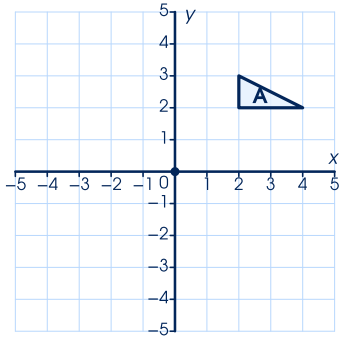

3 Shape A is mapped onto shape B.

Sam says this is a translation.

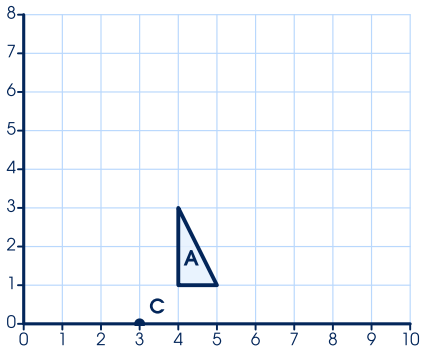

Explain why Sam is wrong.

4 Shape A is rotated 90° clockwise about the origin.

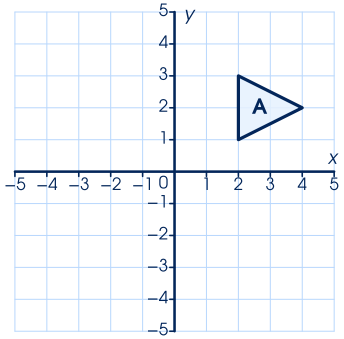

Show that the vertex at (4, 2) moves to (2, –4)

5 Enlarge shape A by scale factor 2, centre (3, 0).

How many times bigger is the area of the image?

6 Shape A is reflected in the x-axis to give shape B.
B is then reflected in the y-axis to give shape C.

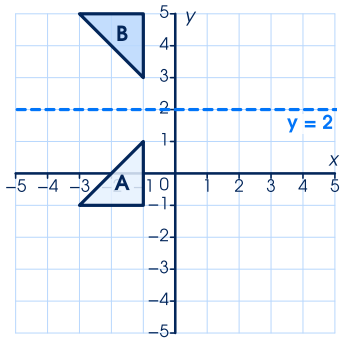

Describe fully the single transformation that maps A onto C.

Mr&Mrs MATHS

1 **Translation** by $\begin{pmatrix} -5 \\ 3 \end{pmatrix}$

2

Each point is the same distance from the mirror line.

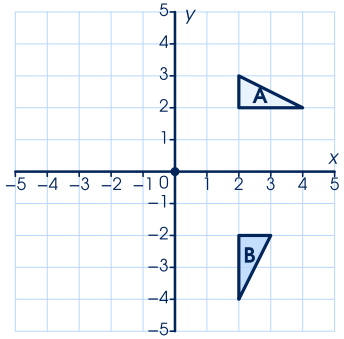

3 B is a mirror image of A (it is flipped), so it is not a translation.

It is a **reflection in the *y*-axis**.

ANSWERS · REVISION MAT 5

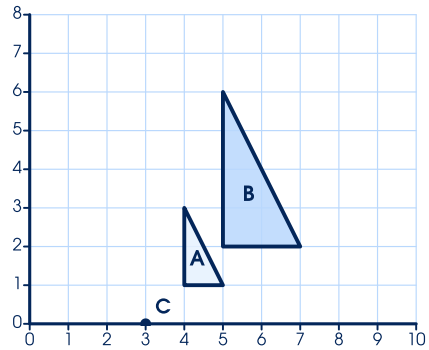

Transformations

4

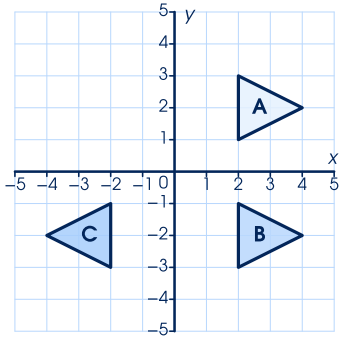

(4, 2) → **(2, –4)** ✓

5

Area is **4 times** bigger (1 → 4 squares)

6

Rotation of 180° about the origin
