GCSE FOUNDATION · REVISION MAT 3

Lines of best fit

1 Draw a line of best fit on the scatter graph.

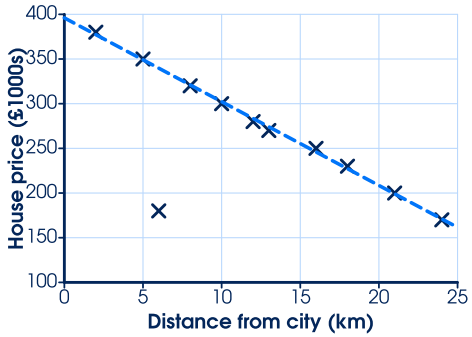

2 A line of best fit has been drawn.

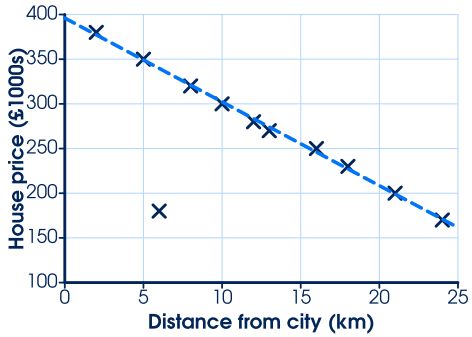

Estimate the house price when the distance from city is 15.

3 A line of best fit has been drawn.

Estimate the distance from city when the house price is 250.

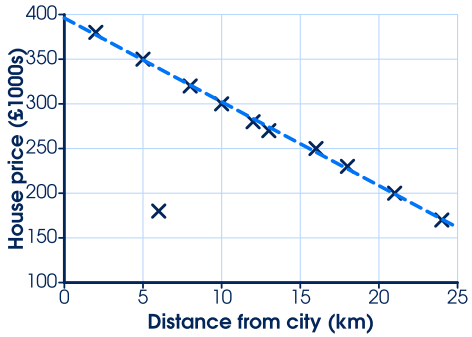

4 A line of best fit has been drawn.

Show that the line passes close to (15, 255).

5 Explain why you should ignore an outlier when drawing a line of best fit.

6 A line of best fit has been drawn.

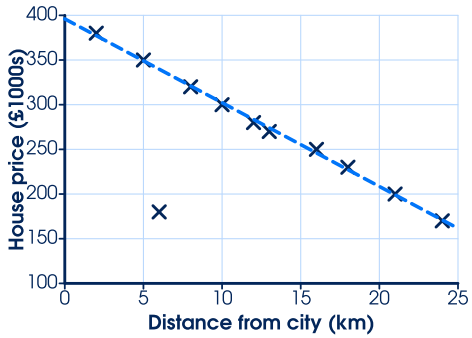

Ruby uses the line to make an estimate inside the data range. Max uses it to estimate for a value far outside the range.

Whose estimate is more reliable? Explain.

Mr&Mrs MATHS

1

A straight line through the middle of the points, ignoring the outlier.

2 About **255.3** (accept close readings)

3 About **15.6** (accept close readings)

ANSWERS · REVISION MAT 3

Lines of best fit

4 Reading up from 15 meets the line at about **255** ✓

5 An outlier does not follow the general pattern.

Including it would pull the line away from the trend of the other points.

6 **Ruby's**: it is inside the range of the data (interpolation).

Max is extrapolating; the trend may not continue.
